

Why PDFs are hard

Every page in this guide is real PDF text set in a standard font, so you can click any line and edit it. Try changing a heading, then open Pages to move this page somewhere else or split the chapter out. Nothing leaves your computer: the file is opened, edited and saved entirely inside your browser. Split by ranges such as 1-3, 7, 9-12, every N pages, or one file per bookmark in this outline. Copied pages are exact: fonts, images and text are byte-for-byte what the original page used.
